

# Extent of green cover with cacao and cashew plantations attained

## Definition

The total land area under cacao and cashew plantations contributing to green cover, environmental sustainability, and carbon sequestration during a specified reporting period, aligned with FAO, UNDP, and climate-smart agriculture indicators.

## Computation Method

Sum the total area (hectares) of land planted with cacao and cashew that is actively maintained and contributing to green cover, as recorded in agricultural or plantation records.

## Unit of measurement

Percentage

## Disaggregation

Total
